

**HEDLER SYSTEMLICHT
PRESS RELEASE**

Hedler Profilux LED 650

Hedler Systemlicht GmbH is pleased to announce the expansion of their popular LED continuous light range: **The NEW HEDLER Profilux LED 650!**

The Hedler Profilux 650 is a sister unit to the existing HEDLER Profilux LED1000, but with a lower power output. This newly developed continuous light unit generates daylight quality light with approx. 5600K and a CRI > 96. The single cell LED rated at 75W and 138 lm per Watt generates a light output power that equates 650 W. And it is flicker-free!

The Unit has an extremely quiet fan and is therefore perfect for Digital Video with original sound recording. The LED has a special, active LED cooling and an average lifetime of approx. 50000 hours!

Another advantage: the HEDLER LED 650 can be used with all the latest original Hedler reflectors and softboxes - due to this flexibility it is an extremely versatile lighting tool. Through the use of the optional reflectors a wide variety of lighting characteristics from hard-brilliant to soft-flattering can be generated. The integrated Hedler QuickFit adapter allows secure, fast and comfortable interchanging of reflectors.

Other features are: LED soft start, dimmable from 5% up to 100% light output power, service indicator and status LEDs, integrated electronic ballast, fan control automatic, recalibration option, automatic mains voltage recognition, multi-voltage from 100 up to 230V, integrated overheat protection, integrated LED safety switch-off and operation-hour counter.

With its compact size of 160 x 165 x 180 mm and weighing only 2550 g, it is perfect for location work. The internal reflector allows a high luminous efficacy of the LED. Range of application, amongst others: DigitalVideo and DigitalPhoto, documentation, high-speed photography, macrophotography and stills.

Order code for the HEDLER LED 650 is: 5011
