

Dear Ladies and Gentlemen,

For many decades, our exposure meters have stood for precision, reliability and the highest measurement quality. They have helped photographers, lighting designers and industry users worldwide to achieve excellent results. We would like to express our sincere thanks for this long-standing trust.

However, as part of a strategic realignment of our product portfolio, we have decided to discontinue the exposure meter product family. This decision was not easy for us, but it is the result of a comprehensive analysis of market requirements, technological developments and our long-term corporate strategy.

The market for classic exposure meters has changed significantly in recent years. In-camera measurement systems and software-based solutions have sustainably reduced the need for stand-alone solutions. At the same time, the demands on development resources, supply chains and certifications are continuously increasing. In order to be able to continue to act as a reliable partner for high-quality measurement and testing technology in the future, we focus our investments specifically on future-oriented product areas.

We would like to thank all customers and partners who have successfully used our exposure meters over many years. Your feedback, applications, and loyalty have shaped this product family.

At the same time, we are looking ahead with confidence. Our strategic focus enables us to drive innovation where it will create the greatest added value in the future – with the clear ambition to continue to stand for quality, precision and reliability.

If you have any questions or need personal advice, our sales team will be happy to help you at any time.

Best regards,  
GOSSEN Foto- und Lichtmesstechnik GmbH

### **Schedule of discontinuation**

Last order date: 27.02.2026

Supply ability: while stocks last

We recommend that planned needs be taken into account in good time and that appropriate orders be placed early.

### Service, repair and spare parts

Of course, we remain committed to our responsibility towards existing users.

For all discontinued exposure meters (DIGIPRO F2, SIXTOMAT F2, DIGIFLASH 2, DIGISIX 2) we guarantee a service and repair period of 5 years.
